iBump Test

BUMP TEST MEASUREMENT APP

DESCRIPTION

iBumpTest is a tool for machine condition monitoring and modal analysis that allows the user to measure the vibration response (natural frequency) of a system to an excitation. A GTI accelerometer, DAQ and impact.

APP FEATURES

- Vibration Spectrum and Force Level meter
- Displays resonance amplitude and frequency values
- Complete PDF report with asset information, GPS location, photo and impact test data
- Email, Save, Print and/or upload to GTI Cloud Report Manager
- In app report manager to view saved report
